SUMMARY

Computer Science student and passionate Frontend Developer with expertise in React, Next.js, HTML/CSS, and modern JavaScript frameworks. Experienced in building responsive and high-performance web applications, Always striving to learn and build new things , I also have a strong foundation in backend technologies (Nest.js, Express, MongoDB, PostgreSQL, Redis). Eager to leverage frontend knowledge to create seamless user experiences and contribute to innovative projects in a collaborative team.

EXPERIENCE

Frontend Developer

Nov 2025 – Feb 2026

Freelance Project

Remote

- Led the front-end architecture of a large-scale enterprise HR & financial management platform built with React 18, TypeScript, Vite, and Tailwind CSS v4 — spanning 15+ modules including Payroll, Invoices, Legal Cases, Contracts, and real-time Communication via Socket.IO
- Established frontend conventions across a full service layer (40+ services), React Query data-fetching hooks, Axios interceptors with JWT refresh logic, a reusable design system (50+ components), and a centralized permissions & roles architecture used across the entire application
- Delivered a fully bilingual (English/Arabic) RTL-ready experience across all 15+ modules by integrating i18next with 14+ namespaced translation files, building custom RTL-aware icon components, and enforcing a locale-driven layout system — with zero layout breakage across complex data tables, multi-step forms, dashboards, and real-time interfaces
- Defined and enforced team coding standards through ESLint configuration, TypeScript strict typing, developer guidelines, and a shared design token system — ensuring consistency, dark mode support, and zero hardcoded colors or text strings across the entire team's output
- Built an internal SVG-to-React icon pipeline via an interactive CLI — automatically converting fill attributes to Tailwind class bindings and scaffolding typed components with `size`, `active`, `className`, and `isRTL` props — eliminating manual icon work across 100+ icons

Frontend Developer Intern

June 2025 – August 2025

Buguard LLC

Remote

- Contributed to the development of a scalable super admin dashboard featuring real-time analytics, user access management, and role-based permissions
- Refactored core table components for efficient data rendering across multiple views, improving reusability and maintainability
- Integrated React Query for caching and background synchronization, cutting redundant API requests by 40%
- Implemented interactive task management features using React DnD and Ant Design with optimized rendering performance
- Participated in daily Agile standups, coordinating backend integration, testing, and feature deployment
- Expanded internship scope to include advanced React patterns, performance optimization techniques, and in-depth study of JavaScript internals and the V8 engine

EDUCATION

Faculty of Electronic Engineering

Menoufia, Egypt

Bachelor of Computer Science and Engineering, GPA: 3.26/4.00

Expected May 2026

- Relevant Coursework: Data Structures and Algorithms (C++), Networks, Database Systems, OOP (C#), Distributed Systems, Parallel Processing, Operating Systems

PROJECTS

Admin Dashboard | *React, React Query, Ant Design, REST APIs* | Private

- Developed a production-ready super admin dashboard to manage internal operations and monitor business KPIs in real time
- Engineered a modular architecture with reusable components for tables, filters, and data visualization across multiple panels

- Implemented robust role-based authentication and granular access control integrated with backend APIs
- Optimized network performance using React Query's caching and background refetching strategies, improving UX and reducing latency

DashStack — PDF Management Dashboard | *Next.js, Supabase, Next-intl, React-PDF* | [Repository](#) | [Demo](#)

- Engineered a bilingual document management platform with secure file storage, real-time preview, and dynamic short-link generation
- Implemented internationalization with Next-intl for seamless Arabic-English localization across routes and components
- Integrated Supabase authentication and row-level security to ensure user-specific file isolation and data privacy
- Optimized PDF rendering using React-PDF and lazy loading to reduce initial load time and improve client performance

Live Leaderboard API | *Node.js, TypeScript, Express.js, Prisma, Redis* | [Repository](#)

- Developed a real-time leaderboard API utilizing Redis sorted sets to handle large-scale concurrent scoring events efficiently
- Implemented secure authentication and authorization with JWT, ensuring consistent identity verification across requests
- Optimized response latency by caching computed scores and refreshing updates asynchronously, achieving sub-50ms updates
- Automated leaderboard resets and maintenance through cron jobs and transaction-safe operations for system stability

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, Python, C++

Frameworks & Libraries: React, Next.js, Node.js, Express.js, NestJS, Tailwind CSS, Redux Toolkit, React Query, Prisma, GSAP

Databases: PostgreSQL, MongoDB, Redis, Supabase

Developer Tools: Git

Languages: English (C1), Arabic (Native)
